# Kelsey's Rhododendrons Azaleas and other Hardy Native American Plants

Grown in the Carolina Mountains, at 3,800 feet elevation

**HIGHLANDS NURSERY, Saginaw, N. C.**

AND

**SALEM NURSERIES, Salem, Mass.**

Grandfather Mountain, 5,978 feet elevation. On its slopes is located Highlands Nursery. Winter temperature as low as 20° Fahr., producing the hardiest stock known.

## TERMS

**TERMS** cash or satisfactory references from unknown parties. Accounts due first of each month, unless by special arrangement. 5 at 10 rates; 50 at 100 rates; 500 at 1,000 rates.

**AN EXTRA CHARGE** is always made for special selection.

**PACKING** free.

**SEND FOREIGN REMITTANCES** by Postal Money Order, drawn on Salem, Mass., postoffice; or by New York or Boston Exchange. An American dollar equals 4 shillings, 4 marks, or 5 francs.

**CLAIMS** must be made on receipt of goods. If there is any mistake or fault on our part, it will be gladly rectified. All shipments travel at consignee's risk, and transportation companies must be held liable for damage in transit.

 Always address,

**HARLAN P. KELSEY, Owner**

Cable Address  
**KELMONT - SALEM**

**SALEM, MASS., U. S. A.**

## Information

**HIGHLANDS NURSERY SHIPMENTS** are made from Pineola, N. C., freight station, and prices in this list are made on this basis. Freight and express rates gladly quoted. Via Norfolk Steamship Lines, deliveries to northern and eastern points are quick and rates low.

**SALEM NURSERIES SHIPMENTS** are made from Salem direct, and Salem price-list must be used in ordering. Prices are about 25 per cent. higher than for similar stock at our main Highlands Nursery. A fine stock of specimen Rhododendrons, Azaleas, Conifers, etc., may be seen at Salem Nurseries, and deliveries to eastern points rarely take more than a day or two.

**SHIPMENTS OF "COLLECTED" RHODODENDRON MAXIMUM AND KALMIAS** are from our special fields in Pennsylvania and the South, depending on destination and quality of stock desired. The best clumps come from the South from high altitudes.

**"COLLECTED" RHODODENDRON CATAWBIENSE AND RHODODENDRON PUNCTATUM** come only from the South.

**OUR NURSERIES ARE UNIQUE**, being the first and only to grow Native American Ornamentals, and we now have the only large and complete stock of Hardy American plants in existence.

**THE LOCATION OF HIGHLANDS NURSERY** also is unique, an elevation of 3,800 feet insuring unquestioned hardiness.

**SHIPPING BEGINS IN SEPTEMBER**, when we send out large Rhododendrons, Kalmias and other evergreens, and bulbs and herbaceous plants, general stock going out in October and November and in spring from about March 1 to May 15. Give shipping instructions, unless you wish to leave it to us. We use our best judgment, but assume no risk.

**OUR EXPORT SHIPMENTS** reach the most remote countries, in perfect condition; we have exported for over 25 years and know how to pack.

**A DESCRIPTIVE CATALOG**, beautifully illustrated, is gladly mailed on request, and advice on the right way to grow Rhododendrons, Azaleas and other native plants gladly given.

## Where Kelsey's Hardy American Plants Are Grown.

**HIGHLANDS NURSERY**, under ideal natural conditions at 3,800 feet elevation in the southern Alleghanies, produces absolutely hardy stock for latitudes as far north as Ottawa, Canada.

**SALEM NURSERIES** carry specimen plants, and are a distributing point for New England.

**SPECIALTIES** : Rhododendrons, Azaleas, Kalmias, Leucothoes, Galax, Rare Ericaceæ Lilies, Trilliums, and the largest general collection of Hardy Native American Plants in existence. Carload shipments for mass planting.

**LANDSCAPE DEPARTMENT.** Planting plans made and executed. Wild gardens, woodland "under" planting, bog and water gardens, rockeries. Broad-leaved Evergreen effects. Formal gardens. Send for Catalogs.

---

September and October is the time to successfully ship and plant Lilies, Trilliums, Cypripediums, Erythroniums and other Bulbs and many Herbaceous Plants.

### \*ANDROMEDA FLORIBUNDA.

Mountain Andromeda. 2 to 4 ft. Compact bush, with shining green leaves and abundant racemes of showy white flowers in May. Without doubt, the choicest of all this section of the Andromeda family. I have over 5,000 bushy plants and clumps on hand at both Nurseries, all with balls, and budded.

## HARDY AMERICAN AZALEAS

American Azaleas are among the choicest ornamentals, whether exotic or native, and were but rarely seen in cultivation before being disseminated by Highlands Nursery.

They are seen at their best when planted in large masses and in properly prepared beds, and they richly repay any unusual care given them. Like most ericaceous plants, they love deep, moist, well-drained soil, and these showy native species are particularly adapted to planting in shrub borders and with Rhododendrons, their brilliant blossoms being set off by a background of dark foliage. Azaleas can be successfully grown almost anywhere, following same instructions given for Rhododendrons. The complete hardiness of all the species we offer is unquestionable. No American shrubs equal the native Azaleas, particularly *A. lutea*, for woodlands and hillsides.

Our cold Carolina mountains have added no more beautiful plants to gardens than these American Azaleas, not even excepting the magnificent broad-leaved evergreen Rhododendrons. My stock of Azaleas, especially *A. arborescens* and *A. lutea* is unequalled. Usually all sizes over 1 ft. are budded, and special attention is called to the larger-sized clumps, which are very heavy and a mass of buds. These are very desirable for immediate and permanent effect. Such specimen stock has never been offered before.

For prices of Specimen Azaleas at Salem Nurseries, see page 22.

*Azalea canescens*

**AZALEA ARBORESCENS.** Fragrant White Azalea. In June the delightfully spicy fragrant white flowers, with pink stamens, appear in profusion, lasting for weeks. Becomes a spreading clump 3 to 6 feet broad in cultivation; easy culture. The foliage often colors striking shades of red in late autumn.

**LATIFOLIA**. Mountain Laurel. One of the grandest of our native, broad-leaved evergreen shrubs, attaining tree-like proportions in our southern mountains. In cultivation it is a broad, thick shrub, and, when in full bloom, of surpassing beauty. The wheel-shaped flowers in close terminal corymbs, pure white to pink, appear in May or June in such profusion as almost to smother the foliage. Its thick, shiny leaves, conspicuous the year round, make it a shrub of greatest value for massing. The hardiness of *Kalmia latifolia* is beyond doubt, it being found sparingly in Nova Scotia and increasingly in abundance through New England and the middle Atlantic states (particularly in the higher altitudes), till the crest of the southern Alleghanies is reached. Here, the true American home of the broad-leaved ericaceæ, perfect conditions of soil and climate are found, producing such a luxuriance of growth as to form veritable jungles of gorgeous beauty, miles in extent. It is found throughout South Carolina, Georgia, and northern Florida, along the banks of streams and cypress swamps. This proves it to be a plant that will stand almost semi-tropical conditions as well as extreme cold. It is therefore extremely valuable for the southern states, taking its place with the magnificent Indian Azaleas, which are not hardy in the North.

## \*Rhododendron Catawbiense, of the Carolina Mountains

It is this magnificent Rhododendrum that over a hundred years ago was introduced into Europe, supplying, together with *Rhododendron maximum* and *R. punctatum*, color and hardy blood to the cultivated "hybrids," but with a consequent loss of hardiness; and so today, for American gardens where ironclad hardiness is essential, we must turn to the true original species, found on the loftiest, coldest peaks of the southern Alleghanies, where it attains a height of 20 to 30 feet.

Considering the extreme hardiness, color of flower, compact growth and remarkable texture of foliage, which is a deep, shiny green and far superior to the better known *Rhododendron maximum*, we can recommend the true native catawbiense as the finest for general use, withstanding exposure and extremes of temperature where other Rhododendrons fail.

Do not confuse this true species, which is absolutely hardy, with the common so-called catawbiense hybrid seedlings so freely imported from Europe, which is at best half-hardy, and even when branched above is a single stem, showing bareness underneath for years.

Unlike *Rhododendron maximum*, it is a very free bloomer, with foliage of a dark, rich, lasting green, which never rusts. The trusses are a bright red-purple, in marked contrast to the muddy purple of the semi-hardy half-breed imported variety noted above and, as sent out by Highlands Nursery are always on their own roots.

For massing to produce a broad-leaved evergreen landscape effect, there is no plant equal to it in the latitude of the northern United States and Canada, where strictly hardy plants must be employed. As a rich, finished border to plantations of the commoner *Rhododendron maximum* and *Kalmia latifolia*, the value of *Rhododendron catawbiense* cannot be overestimated.

Do not compare our many-stemmed clumps with the single-stemmed, "bushy" half-hardy Rhododendrons offered by importers. There is no comparison.

It is the dream of every plant lover to have, some day, a "Rhododendron Bed" and all that this implies. By following instructions given in my Descriptive Catalog you are assured success.

## \*Rhododendron maximum

The Great American Rosebay

Perfectly Hardy in the Latitude of Quebec

**Rhododendron maximum** is, without doubt, the noblest of American broad-leaved shrubs. It is found growing sparingly in New England and New York, more abundantly in the Pennsylvania mountains, but reaching perfection only in the southern Alleghany mountains, where it grows in such luxuriance as to form a striking feature in the mountain landscape. Its large, waxy white or delicately pink flowers appear in large trusses in July, the latest of all the Rhododendrons, greatly enhancing its ornamental value as a broad-leaved evergreen for finished landscape effect.

Not even in Asia do Rhododendrons grow more luxuriantly than in our southern Alleghany mountains, where they attain a height of 30 feet or more. They must be seen in their native iavishness of growth and bloom, on the mountain sides or hanging over the dashing ice-cold streams and waterfalls, to be properly appreciated, and a trip to the high Carolina mountains in spring and early summer is a never-to-be-forgotten series of joys to the lover of nature.

In our northern gardens *Rhododendron maximum* (and other species to a small extent) is subject to damaging attacks from the lace-wing fly, particularly in sunny locations. I recommend an emulsion of five to ten pounds whale-oil soap and one to two quarts kerosene to 100 gallons of water, used with a spray pump with fine nozzle.

# KELSEY'S Hardy American Plants Rhododendrons and Azaleas

Catalog of Highlands Nursery

## \*Rhododendron punctatum

The smallest Alleghanian species, though it often attains a height of 15 feet and is wide-spreading. A very graceful shrub, with totally different aspect from the two species preceding. Leaves dark green, usually blunt and narrow, covered with rusty dots below, much smaller than either Maximum or Catawbiense. Flower clusters appear in greatest profusion in June, covering the plant with a rose-colored mantle. Fine for rocky slopes or hillsides, standing exposure unusually well, and invaluable as a single specimen or for massing with the other species.

## Hardy Hybrid Rhododendrons

Having had a continued call for the hardier Hybrids, for use in planting with our native species, I have imported the best ones. By growing several seasons in nursery under favorable conditions, I have acclimated them, and this stock is as reliable as can be had.

## Best Plants for the Rhododendron Beds and for Ground Cover

Some of the most successful are *Andromeda polifolia*, *Chamædaphne calyculata*, *Dendrium buxifolium*, *D. prostratum*, *Ilex glabra*, *Leucothoe catesbæi*, *Pieris floribunda*, *Taxus minor*, *Galax aphylla*, *Gaultheria procumbens*, *Houstonia serpyllifolia*, *Mitchella repens*, *Shortia galacifolia*, *Vinca minor*, *V. minor alba*, *Xanthorrhiza apiifolia*, Lilies, Trilliums, Erythroniums, Ferns, *Dicentra eximia*, Iris, etc.

## Rhododendrons Delivered at Your Station by the Carload

### "Collected" and Nursery-grown

For the area covered and effect produced, a "carload" of Rhododendrons is the cheapest landscape proposition offered. I am offering an unusual grade of splendid clumps, each plant a specimen and burlapped separately. Don't accept "cheap" stock, thrown into cars without burlapping and with the fine hair-like rootlets inevitably exposed. You will be disappointed and find it expensive in the end.

### Rhododendron maximum and R. catawbiense

In mixed car, delivered free at any station east of Mississippi river.

Car containing 150 maximum and 150 catawbiense, "collected" as above.

1½ to 4-ft. clumps—a total of 300—for \$400.

Car containing 250 maximum and 250 catawbiense, 1½ to 4-ft. clumps—a total of 500—for \$600.

Twenty-five years' experience growing "American Plants" is at the service of my customers.

### Kalmia latifolia by carload

Each specimen burlapped, and highest class clumps, "collected" from open, delivered free at your station, if east of Mississippi river.

Car, containing 400 clumps, 1 to 3½ ft., for \$375. *Kalmia* may be added to help fill any Rhododendron car at \$1 per clump.

25,000 nursery-grown plants in all sizes. See free Catalog.

At the same cost, nothing approaches our magnificent hardy American Rhododendrons and other Native Broad-leaved Evergreens for splendid foliage and flower effects.

\***CAROLINIANA.** Carolina Hemlock. 40 to 80 ft. This grand new Hemlock, introduced by us, possesses a distinct pyramidal growth and attains a height of 40 to 80 ft. Its dense, dark foliage and graceful habit are approached only by some of the finer Japanese Hemlocks, which it somewhat resembles. Some fine specimens are to be seen in the Arnold Arboretum, and are the first plants of this Hemlock ever sent out, being supplied by us to Prof. C. S. Sargent, director, in 1884.

\***MACROCARPON (oxycoccus).** American Cranberry. 8 in. By accident I discovered that this little bog evergreen thrives in **ordinary garden soil**, forming a complete carpet a few inches high. As a border plant or along edges of streams or ponds, or as a bog feature, it is unequalled. Foliage turns rich shades of bronze and red in autumn, and, with the scarlet fruit, presents a charming effect the year round. Over 20,000 plants supplied by me to a single estate at my suggestion, with beautiful results

<b>STENANTHIUM ROBUSTUM.</b> Mt. Feather Fleece. 3 to 5 ft. Tall, with extremely showy panicles often 2 feet long. This is one of our recent introductions, and is, without doubt, a plant that will be used by thousands when known. The pure white flowers are borne on graceful compound panicles, often 2 to 3 feet long, and a clump of these plants makes a show equaled by few herbaceous plants of any description.

## Catalog Salem Nurseries

Salem, Mass. On Marblehead Road

An unusually fine lot of specimen Evergreens, Azaleas, Rhododendrons, Kalmias, Andromedas, Leucothoes and Shrubs. Personal inspection is invited and special prices made for carload shipments. August to October planting for most conifers and broad-leaved evergreens noted above is very desirable.

Special selection is always charged for at prices to suit the material, with packing at cost, and in *Rhododendron catawbiense*, *R. maximum* and *Azalea arborescens* the most exacting requirements can be met. A visit to my Salem Nurseries will well repay the large or small buyer.

EVERGREENS ARE MARKED WITH A STAR (\*)

"Clumps" always cost more than single plants. A comparison will tell why

# Fall Planting of American Lilies and Trilliums

## For Permanence

**O**UR native Lilies are the most useful for real permanence. Exotic species rarely persist, but get weaker and die out after a few seasons.

For shrubberies and herbaceous borders, and especially for the Rhododendron bed, and the open edge of woodlands, the native species named below are unexcelled, grow stronger year by year, and produce gorgeous effects.

For best results, plant in September or October, 4 to 5 inches deep in rich loam. *Lilium grayi* and *L. canadense* will stand considerable moisture. The finest show is made by planting five to ten bulbs a few inches apart in a clump, the clumps 2 to 4 feet apart, according to conditions, hundreds or thousands of bulbs often being none too many to use. *L. superbum* is a tall species, often reaching 6 to 8 feet in height; *L. canadense* comes next, and *L. grayi* from 1½ to 3 feet; so judgment should be used in placing.

Prices below packed ready for shipment at my Highlands Nursery, Pineola, North Carolina

## LILIES

**LILIUM CANADENSE.** Wild Yellow Lily. 2 to 5 feet. Yellow or orange, usually spotted with brown. July.

**L. GRAYI.** 1½ to 3 feet. Introduced by me in 1888, it has proved the leader in the bell-shaped type of hardy Lilies. Dark red-brown petals, beautifully spotted. An exquisite species and very rare. Bulbs are never large.

	Per 10	100	1,000
First size.....	\$1 50	\$12 50	\$100 00
Second size.....	1 00	8 00	

**L. SUPERBUM.** Turk's Cap Lily. 3 to 6 feet. No description will do justice to this magnificent American Lily. Golden recurved petals, the flowers in perfect pyramids, often 40 on a single stalk. A clump of them is literally a blaze of scarlet and gold.

	Per 10	100	1,000
First size.....	\$1 00	\$8 00	\$60 00
Second size.....	75	5 00	35 00

*Trillium grandiflorum*

*Trillium erectum*

*The Bloodroot*

**SANGUINARIA CANADENSIS.** Bloodroot. One of the most dainty and exquisite of our early spring flowers. Give it rich, deep, moist loam and partially shady situation and you will be well repaid. 75 cts. for 10, \$6 for 100, \$36 per 1,000.

**STENANTHIUM ROBUSTUM.** Mt. Feather Fleece. 3 to 5 feet. Tall, with extremely showy panicles often 2 feet long. This is one of our recent introductions, and is, without doubt, a plant that will be used by thousands when known. The pure white flowers are borne on graceful compound panicles, often 2 to 3 feet long, and a clump of these plants makes a show equaled by few herbaceous plants of any description.

	Per 10	100	1,000
First size.....	\$3 00	\$26 00	
Second size.....	1 50	12 50	\$100 00
Third size.....	1 00	8 00	60 00

## TRILLIUMS

For edge or under-woods planting, nothing equals the trilliums. They must be planted in large quantities for showiest effects, though a single strong clump of say 25 or 50 bulbs in a garden or border is a wonderfully beautiful thing, and permanent. Brilliant scarlet fruit pods succeed the showy flowers.

**TRILLIUM GRANDIFLORUM.** Large-flowered Wake Robin. 8 to 18 inches. The finest and largest species. Flowers 2 to 3 inches across, in April and May. One of our best early spring flowers. White, turning rose-color or marked with green.

	Per 10	100	1,000
First size, large bulbs.....	\$0 60	\$3 50	\$20 00
Second size, medium.....		30	1 50 12 00

**T. ERECTUM.** Erect Wake Robin. 8 to 16 inches. Large, red fruit, very ornamental. Brown-purple, often greenish. April and May.

	Per 10	100	1,000
First size.....	\$0 75	\$5 00	\$30 00
Second size, light.....	40	3 00	18 00

**T. STYLOSUM.** Nodding Trillium. 1 to 1½ feet. Our rarest mountain species. April and May. Large wavy petals of beautiful pink.

	Per 10	100	1,000
First size, large bulbs.....	\$1 00	\$8 00	\$60 00
Second size, medium bulbs.....		60	4 00

**T. UNDULATUM.** Painted Wake Robin. 8 inches. Earliest, blooming in April. Showy flowers and fruit. White, with purple stripes.

	Per 10	100	1,000
First size.....	\$0 75	\$6 00	\$40 00
Second size.....	60	4 00	30 00

## Hardy Herbaceous Perennials

Any Hardy Herbaceous Perennials desired can be supplied at prices to fit the quality of the stock. It does not pay to use weak plants which can be bought cheap, but rather secure strong established stuff that will produce quick, permanent results. Only a few specialties are given below. See also Highlands Nursery Price List pages 16 to 21.

## Landscape Department

Visits are made for consultation and advice, to make surveys, designs and planting plans. Entire construction, planting and carrying out of Landscape work of all kinds undertaken, and charges will be found reasonably consistent with good workmanship and permanent results.

**The Wild Garden.** The basis of all the best landscape work of a permanent nature must be Native Plants and particularly where naturalistic effects are desired. If this fact is ignored, tame and fleeting results will follow. I make a specialty of **wild gardening** and my long experience is here of greatest value. Every garden or estate has its own peculiar problems and a discussion of details may prove helpful in unexpected ways. Address,

**HARLAN P. KELSEY**
